

Vitals – Clinical Summary Report

(Prescription-style summary for clinician review – not a legal medical record)

Generated: 2026-04-10T13:54:39.384Z

Internal record ID: 75856e2f-9204-4362-b735-e650d62af16e

Attending clinician (account): aryansaini2004feb@gmail.com

Call duration: 1m 29s

Patient

Name: Anita

Known condition / focus: Type 2 Diabetes

Relevant history & context

Patient has a history of Type 2 Diabetes.

Executive summary

Patient reports significant fatigue and complete difficulty breathing. These acute symptoms are concerning and require immediate clinical attention.

Symptoms reported / observed

- Fatigue — patient said: "I'm so tired, I can't even get out of bed."
- Dyspnea — patient said: "I can't breathe, it's so hard to get air into my lungs."

Clinical impression (working diagnosis)

Acute onset of severe fatigue and dyspnea, cause currently unknown.

Clinical reasoning (brief)

Patient explicitly states experiencing very significant fatigue and complete difficulty breathing. The acute nature and severity of the dyspnea are red flags that necessitate urgent evaluation.

Differential considerations (for review)

- Respiratory infection
- Diabetic complication (e.g., DKA/HHS)

Structured vitals / measurements (from AI extract)

None captured in structured form.

Triage / alert

Risk level: high

Alert type: Acute dyspnea and fatigue — urgent evaluation needed

Plan & follow-up

Follow up with the patient within 30 minutes; escalate if unable to reach patient or symptoms worsen.

Immediate actions recommended

Patient requires urgent clinical assessment. Attempt to connect patient with a clinician immediately or advise emergency department visit.
